

ABSTRACT OF THE DISCLOSURE

An image information processing device includes:

a display section;

an image information storage section;

an image information display setting section for providing a detailed information display area and a scaled-down image display area;

an image information display control section for causing sets of detailed information and scaled-down images of a plurality of sets of image information stored in the image information storage section to be displayed in the detailed information display area and the scaled-down image display area respectively; and

an interlinked display control section for, when a display order of either the detailed information or the scaled-down images is changed, setting a display order of the other so that the detailed information and scaled-down images of the plurality of sets of image information are displayed in an identical display order. This improves convenience on the display when the user performs various operations and the like using the information displayed on the display section.
